## Hunger and Drought Mocks us in 2030

By Eugene

Meet Ekuru, a middle aged man from Mosoit who has since moved from home and set up a new homestead near a water borehole in Katweri. It is not Mr Ekuru alone who had to leave his home to come and make an establishment here. There are several families here too. A massive drought struck this area about a 2 years ago. With it came with consequences like water shortage, food crisis and death of livestock. To

Ekuru's community death of livestock to them is like somebody robbing your personal bank account and making off with your whole life savings. They have always been on the move on this vast plain of land looking for new fresh water sources, grazing land and agricultural viable land. "I think we have covered over 1200 kilometers over the period. I have lost relatives several relatives-including my children." Said Ekuru adding that this is the worst drought which

**File Photo**

has hit the area for over 15 years. "There's hardly any grass now, so the livestock have been swept away - half my animals have died (75 of them) and it is the same story with everyone

around here. We are mourning our relatives in the night and mourn our animals in the day"

## Our Health Is More Important Than Industrialization

File Photo of One the Recently Established Coal Burning Industry in South B, Nairobi

By Hasina

We had envisioned a 2030, in which the country had undergone through tremendous

modernization and industrialization. But here we are in 2030 sitting and recalling **Continued in page 2**

## Why Projects Implementation is Turning Out to be a Nightmare in Kenya

By Flavia

There is a greater feeling of dissatisfaction among the populace that much of the

projects are not getting implemented because the country still relies on **Continues on Page 2**

Starting from tomorrow Tuesday, June 13th 2030 you can visit any national park near you with your national ID and get your entry fee waived by half

Dont be left outtt!!!! KQ is now offering affordable flight rates to Mombasa, enjoy while it lasts!!! Show your family some love

## ***the period”***

At night Ekuru's remaining wife, cooks for him a carefully rationed relief meal in the hope that it will last till the next food distribution- a four hour walk away.

Ekuru tells us that there has been a bout of water borne diseases which have struck them here Katweri because of poor hygiene conditions. Many have lost their lives and many are still sick. Many people here are worried that if nobody come to their aid, the whole population maybe wiped out axing out a whole

generation.

“We want if it possible our children be taken far away from here to be given education and good so that one day they may carry on with our generation.”,said a clearly pained Asunta.

In this place every hour one is alive counts.

People are worried and feel neglected. In their opinion, vision 2030 is a blueprint which was made for already established places like Nairobi.

“ We really dont care about vision 2030, what we care about is when we are receiving our next

relief food and finding something for our even if it means sharing with them the Relief food” asserts Ekuru.

***“Many people here are worried that if nobody come to their aid, the whole population maybe wiped out”***

What everyone seems to be talking about is that the insufficient rainfalls are as a result of the many industries which came hand in hand with vision 2030.

what we had in the 90s tears fill our eyes. . Today pollution, a monster we watched grow is taking away our lives slowly. People are worried and scared of several things. For example air pollution brings about a depletion effect in the Ozone layer. This in turn brings about global warming which has seen

change in patterns of rainfall. The Air Polution also got an really massive effect on flowers and plants. Several policy makers from abroad and local have been working hand inhand to ensure that pollution is minimized at all costs. On May 12th 2030 a conference was held in nanyuki. The conference was attended by world renown enviromentalists.

Some resolutions were made from

the conference for example Kenya had to the amount of coal she was burning in her industries. Another thing was that the already existing industries were to be given a 3 month reprieve with which they had to come up with proper waste management. Failure to do so would attract heavy penalties and even closing of the industries. Right now the main event that everyone is talking about is that Global Warming is for real. and alot must be put in place to help curb the menace.

**1** heavily on foreign borrowing. Mismanagement of funds has also greatly led to dragging behind. Large amount of money set aside for the implementation go unaccounted for on how it is been spent.due to this the country runs out of

capital before the projects are fully done. Another factor which has deranged implementation process has been choice of leaders. There are some elected leaders who are not really in implementing certain projects. This has seen a slow rate of implementation.

## **Could Advancement in Technology Eroding Family Values**

***File photo of teenagers engagingone another***

**By Triza**

With imense technological advancement many parents are now fearing that family values of keeping together are eroded. Many parents feel their teenagers are spending much time on their communication gadgets than with real family.
