

The future isn't so far as you think

Here we are, and we are about to blow your mind away by this little invention.

2030

We are in 2030 and dreams are slowly happening. Today thanks to The Four W, a group of scientist mostly known for their help for our planet to step on her feet again after the Big Emigration, we are about to show you the goal we were seeking. Teleportation isn't just a word anymore. We turned that dream into something everyone can start talking about. We have just made your life a little more special. Welcome to your future developed by us.

So basically, we are talking about tattoos. Yes, you heard us. You can make a tattoo in whatever form you would like and whatever colour you prefer. In this little tattoo, you will have a microchip connected to a creditcard sized touchcard. You know, the one where you click it and things happen. On the display, you can write the place you would like to visit. And don't worry. Having these summer shorts and wanting to go to Canada. It is not a problem. You can order clothes online in different places. There are no boundaries for our dreams so we turned them into realities and if you are a kid of the future, you should try this

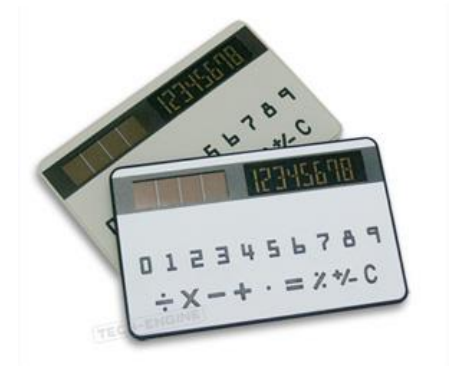

new changing innovative device.. it will cost a lot but it is worth it. Tthe price is **15 000 Euros per chip** and the tattoo is free. If somehow your chip breaks, we are going to replace it **TOTALLY FOR FREE!!!**

This might be your tattoo!

About the tattoo, it is made from bio materials so it won't hurt you... Our invention lasts only once then you have to wait 1 hour for it to regenerate and then you can use it again. Because we don't want anyone to have control over your teleportation, we have made the TeleTattoos with Fingerprint sensors. Nobody, except you, could use your transportation device. So future or should I call you past .. are you ready for us because we are absolutely ready to change your life.. better seat your bells because here we are.. the ghosts of the future and as we have just showed you.. we are the ghosts who won't

leave until we accomplish our goals ..to make you happy about being a kid of 2030...

This is the chip that will be on the tattoo

One of the best use and from where our first idea came is that teleporting can help many by letting us being on time in every situation. whenever a person needs medical help or there is an attack ..the best medics can be on place the second they hear about the problem ..it will help us beat some of the biggest problem we didn't succeed to handle.. like terrorists, medical conditions, fire, car crashes, plane crashes and so on.
