

2030 - people's worries

Interview with the volunteers of BRCY Burgas

- ***What are people in 2030 worried about?***
- ***What are they working to overcome?***
- ***What;s the main event or thing that everyone is talking about?***
- ***You can see the answers of the volunteers of BRCY Burgas on page 2***

Nowadays one of the most popular topics is the fast growing population and the problems that it causes.

That's why we decided to make an interview with the volunteers of the BRCY Burgas, Bulgaria, so we can see their point of view (how and with what can they help with the solution of this problem).

Interview

Q: What are people in 2030 worried about?

A: People are worried about the eventual shortage of clean water, the pollution of the environment, depletion of the earth resources and poor quality of the health care.

Q: What are they working to overcome?

A: Concerning the growing population, in our opinion, there have to be made trainings about reproductive health, and also about HIV/ AIDS. 2. Concerning the lack of clean water, we have to help those who need it, to reach it, and also we have to encourage the government to build more purifying stations for water.

Concerning the depletion of the earth resources - RC has to inform people (to announce that our resources /oil, gas, coal and etc./ will disappear.

People should be prepared for this problem. Again we have to encourage the government to make bio fuels (from rapeseeds, corn and etc.) and to encourage the production of electric vehicles.

Concerning the pollution of the environment - RC should direct its powers and resources to the ecology, because this problem grows each day. Nature is the most important part in the Earth, because when it lives, we do to. Also the pollution leads to one big worldwide problem - global warming. So it's in our interest to keep it clean. For this purpose there can be made trainings about ecology (how to recycle, how to keep the nature clean, how to control

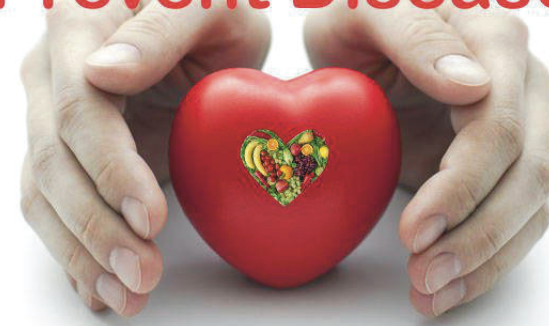

menage and etc.) Likewise nature gives us food, which we can't live without, so there can be made trainings for this question too.

Concerning the poor health care - The more people there are and the less water, hygiene will drop drastically and that

will lead to the appearance of more disease and the inability of the hospitals to take in and take care of so much people. So RC should make new trainings about how to prevent the disease and its development. There has to be more informing campaigns in help of the people. Also it has to be emphasized in first aid, so that there will be people who can help in need.

Prevent Disease

Q: What's the main event or thing that everyone is talking about?

A: In this moment a new current question, which answer is yet waiting for its answer, is - is it possible to have a colony on Mars. This can happen, because of the overpopulation on Earth or because a future global disaster, and the colony can eventually be our last hope for continuation of our kind.
