## OUR PROJECTS

### THE ELECTRIC DYNAMO

Our country is not entirely flat you, its normal if drive a few kilometers you find a slope. In general the Idea of motors in car is to cut the fuel cost hence the motors contain magnets, coils and the rotor that provide motion when powered on its terminals;

### THE SOLAR POWERD BUS

Our buses are the new and quite unique solar energy powered buses, that means they are generating zero emissions unlike the gas-powered buses. This technology is quite simple in fact. Solar panels are installed on top of the bus in order to gather energy necessary during the day and other energy is stored in batteries to enable use during night time.
