## Is it over? Or are we still fighting for our survival?

### The Four W & their opinions

*Interview from Stanimir Dimitrov*

If you are reading this, then you are one of the few that can nowadays afford to buy Newspaper. Well, today we are publishing a special edition because we have four guests, namely "The Four W"\* Our best Environmental Scientists Mrs. Nalbantova and Mrs. Grigorova, Mrs. Anova our Political Advisor and Mrs. Solakova, the best Cultural Expert the mankind has ever known. The world hopes for our best four women to find a solution to the Planet Wars of 2030\*. But are these wars ever going to stop? I personally met "The Four W" and asked them some questions. Let's hear their opinions.

**Mr.Dimitrov:** The Four W, I am so glad we can meet and talk about the problems our society is having.

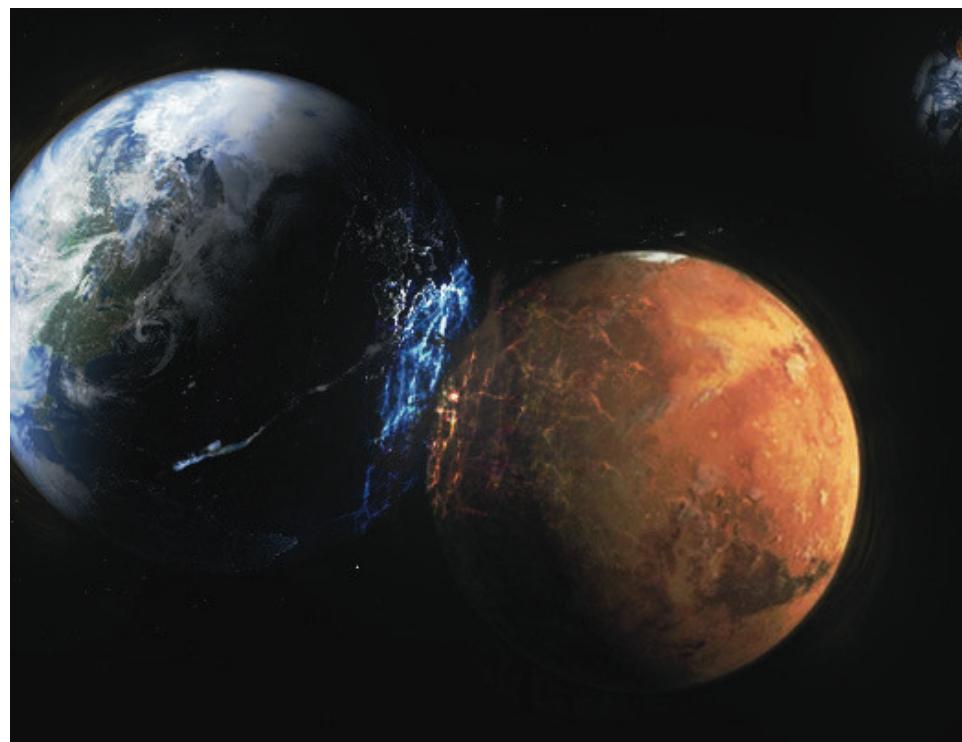

**Mrs.Nalbantova:** We are really glad too, Mister Dimitrov.

**Mr.Dimitrov:** Mrs. Nalbantova can I start with you and your partner Mrs. Grigorova? You are our main Environmental Scientists so how do you think that we could improve our Environment since the big "Planet Emigration" where everyone made our planet miserable and left it? How can we produce food on fields like a decade ago? What about our water? Do you think that we can have clean fresh water from the sink again or do we still have to give a huge amount of money for little litters of water?

**Mrs.Nalbantova:** Well, Mr Dimitrov, these are all good questions. I can assure you that even though everyone left the planet Earth, it still has many things to offer us, it has many resources we haven't even discovered yet, i believe. I don't really see why people would choose another planet rather than their own beautiful one. Sure, it has its negative sides and problems but it is all worth it. We can get stuff like food or water with a little bit of effort, we can clean up our dirty planet and

transform it into a bright diamond, like it was a decade ago. We just need to want it strong enough and put everything we've got into it.

**Mrs. Grigorova:** As for the Water, we are on our way to producing a huge amount of water with just little electricity and materials so it is going to be fast and cheap. Food can be soon planted normally into fields as we are working on a new kind of Soil.

Mr.Dimitrov: Mrs. Anova, you are our main Political Advisor. Can you please describe us the Political relationship our main Planets are having? How, your opinion, can we prevent wars and maybe make peace with them?

**Mrs. Anova:** Thanks Mr Dimitrov. For now, our relationship with their government is a little bit difficult. We are trying to show to our Mars friends what's happening with their previous home. Sadly, most of the people there don't care about us and our home on the Earth. They think it is just something datum and they don't even think about the consequences after leaving our planet. It will be hard to stop human-mind war just because it

is in our minds and many of us make it because they like it. First, we must rethink our actions and the people here to start the peace campaign. Others would do it. This is must be our initiative, we must begin it and show them what to do and then they will start to help us.

**Mr.Dimitrov:** Solakova, you are our main Cul-

life, because God I thought to be a man it would be just a little more difficult due to the fact that we will be a combination between human and an alien, so there is no God. There will be a Alumany. The name of the new figure we are about to honor and follow even in hard times. Of course, I am not about to give you every detail, you need to be surprised. I hope you enjoy our tiny example of what might happen. Now it's your turn is to be find out how much of this is true... Are you ready?

-----  
\*"The Four W" - known as The Four Women are Miss Nalbantova and Miss Grigorova, Miss Anova Miss Solakova. They are planet Earths "Rescue Squad" and are responsible for our improvement since the big "Planet Emigration" where people left our Planet dirty, miserable and went to Mars.

\*The Planet Wars of 2030 - Since 2018 people have moved to the planet Mars and a new colony was made. Now there are 1,257,219 Milliard people on the planet Mars which do claim to be different from us, people on the planet Earth. They claim to be founders of a lot of things which we have used years ago. Because of such statements, we have declared and won and lost a lot of wars against them.

tural Expert. Can you tell us with what exactly the "new" Mars Culture is different from ours? After all we are their precursors. Do they believe in God? Do they have new religions?

**Mrs. Solakova:** Hello everyone. I think that everybody here is trumbling to know what exactly might be the changes between our culture and the one there. So basically, it is the same except the fact that there you are able to breath underwater, that will give us the opportunity to have out main church events underwater in order to have a better connection with our precursors even though we are their precursors. In this way, we will have a better way of going through all of the stages of our
