

Proposal 1

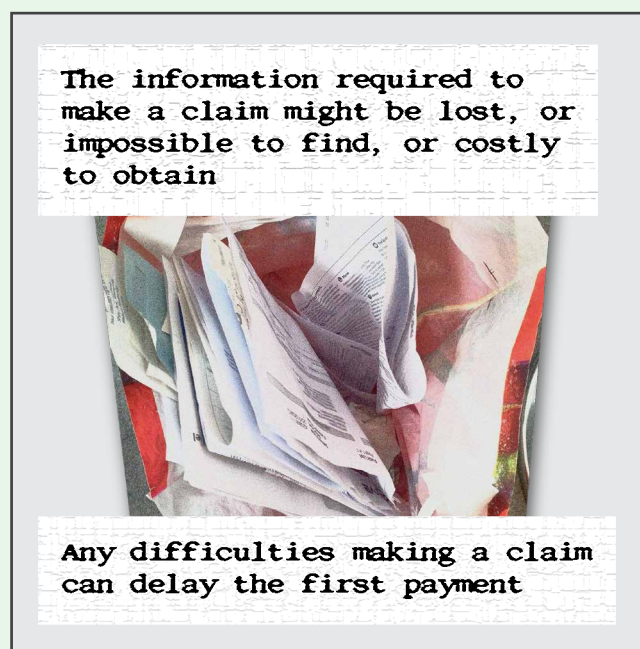

What did citizens say about Universal Credit online?

In previous interviews, some people mentioned these issues:

1.

2.

3.

What might help?

Proposal 1 is a series of guided activities for those not yet claiming Universal Credit, as a preparation measure. These include gathering together the necessary documents and other needed information, creating an email account, registering with Universal Credit and doing identify verification. The activities are undertaken online, and also physically together with local community support.

How would that work?

Have a look at the explanation of what we'll call Proposal 1, "Pre:Peer", on the next page:

Start here

UC = Universal Credit

Kate and Jo are both working but their jobs are not secure and want to be ready in case they have to claim UC

They decide to use the **Pre:Peer** digital platform to link up with other people doing the same preparations, share knowledge and do activities taking them through all the necessary steps that can be done in advance

Kate and Jo physically meet a **Pre:Peer** facilitator who helps them get going, introduces other local people and provides telephone and online support

They use the steps in the **Pre:Peer** physical-digital workbook to gather and add all the information, evidence, identity documents and so on, and are shown how to import some details from government systems and elsewhere

Different people have their own particular circumstances and are at various stages of preparation, so there is plenty of diversity in community support available

Pre:Peer registers linked UC accounts for their household and uploads the identity verification information, creating email accounts too if needed

The UC accounts wait, ready for speedy use when needed, preventing anyone else using their identities to make UC claims

A few months later...

Kate's employment ends suddenly without notice - straight away they use **Pre:Peer** to submit the previously prepared claim

Finish

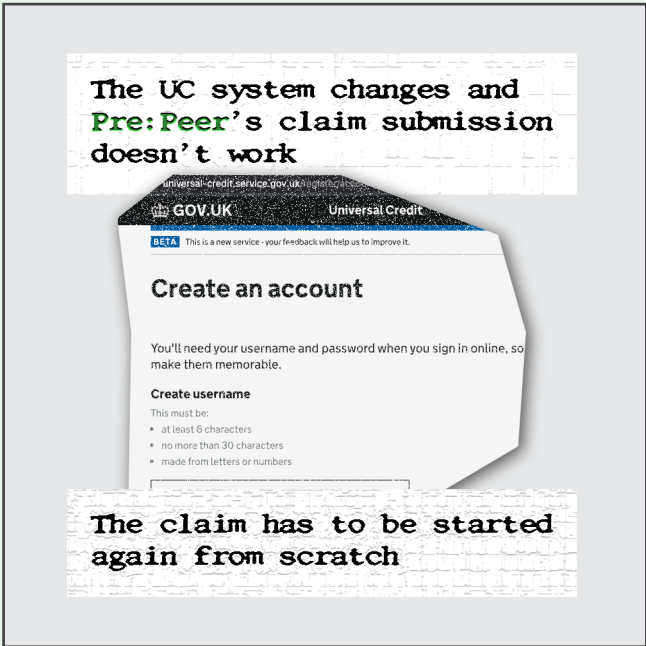

How might this go wrong?

Here are some possibilities:

A.

B.

C.

What do you think?

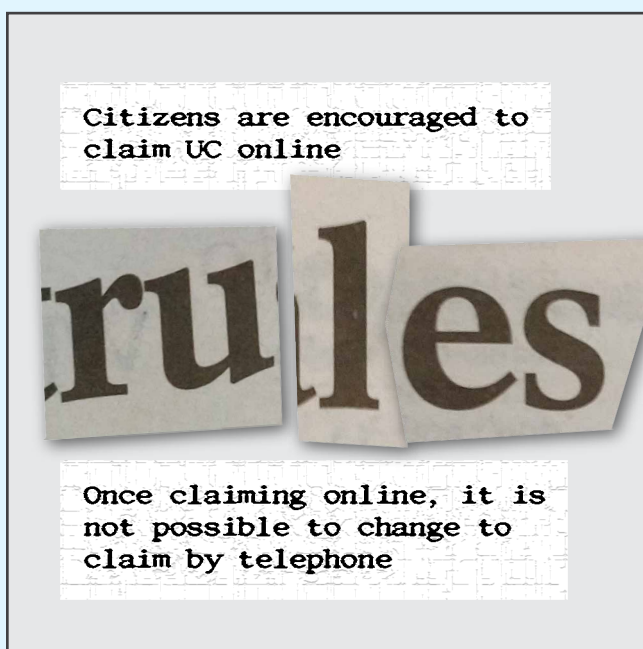

We will now ask some questions about this proposal.

Proposal 2

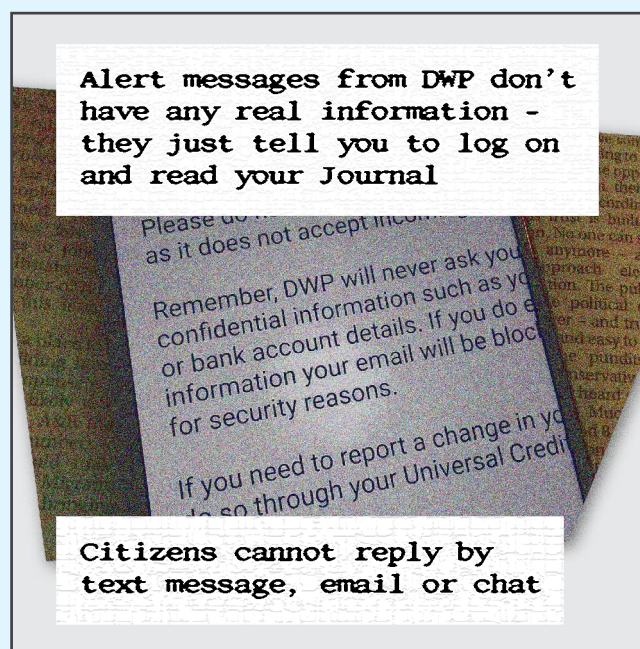

What did citizens say about Universal Credit online?

In previous interviews, some people mentioned these issues:

1.

2.

3.

What might help?

Proposal 2 is a service which converts Universal Credit alert messages between different methods (not just SMS text and email). The message automatically includes the related Journal note or To Do list item, rather than just being an instruction to log on. Citizens can view messages in many different ways (even in other languages and alternative formats like large print, or braille), and copy or forward messages to other people. Citizens can also reply to the message by any method, and this is automatically added to their Journal without ever logging on.

How would that work?

Have a look at the explanation of what we'll call Proposal 2 "Channel:Expander", on the next page:

Channel:Expander

Start here

Amelia and Barry are working and receive UC due to low wages

UC = Universal Credit

Like many people, they claimed UC using the online website and selected to receive SMS message alerts

Having to log on when an alert arrives, or to add something to the Journal is time-consuming, uses data and a bit fiddly, so they joined Channel:Expander, which provides many other methods

They both have free WhatsApp data usage with their mobile phone packages and set Channel:Expander to convert all UC text messages to WhatsApp chats, sent to both Barry and Amelia

She is Italian, so chooses auto-translation, making chats simpler and quicker to cope with, and Channel:Expander deals with her replies too, converting an Italian chat reply directly into an English UC Journal entry

Ciao Amelia!

Workcoach adds a message to Barry's Journal

A new To-do item...

The message explains there is a request to upload some of Barry's older payslips

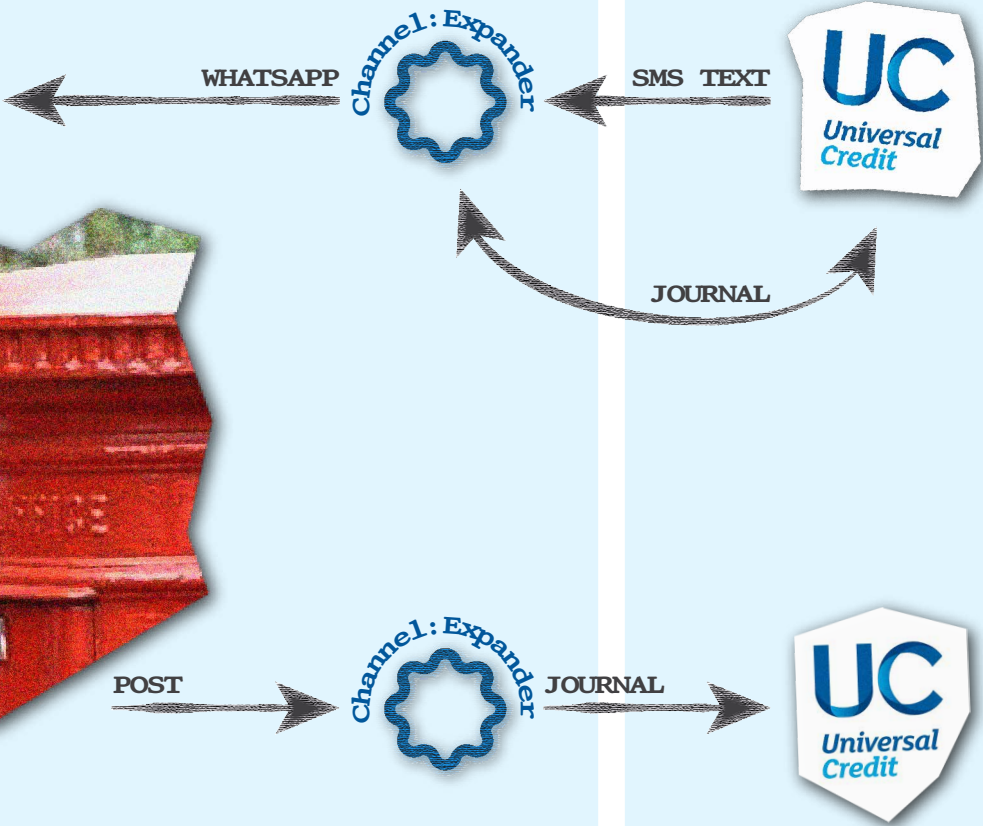

With Channel:Expander you can mix-and-match methods any way at any time - Barry cannot scan paperwork so decides to reply by Royal Mail... he just writes the alert's unique code on an envelope and inserts the payslips

He posts it on his way to work, and the Journal message has been dealt with

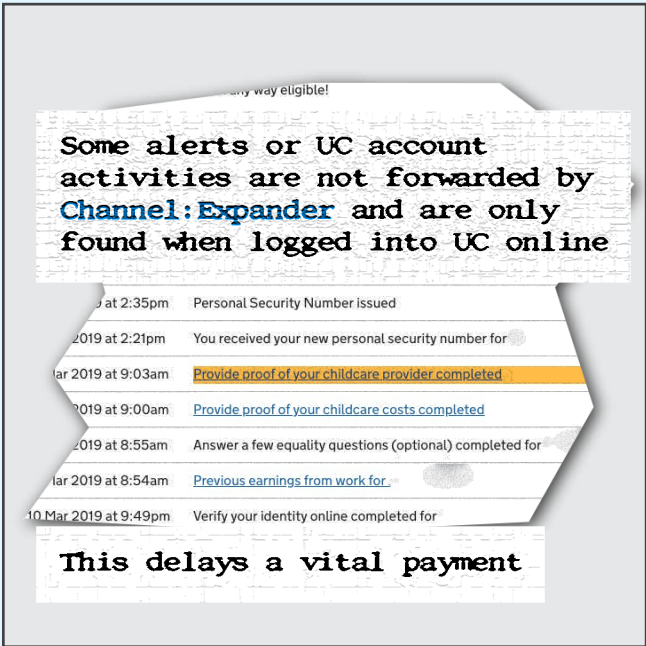

Finish

How might this go wrong?

Here are some possibilities:

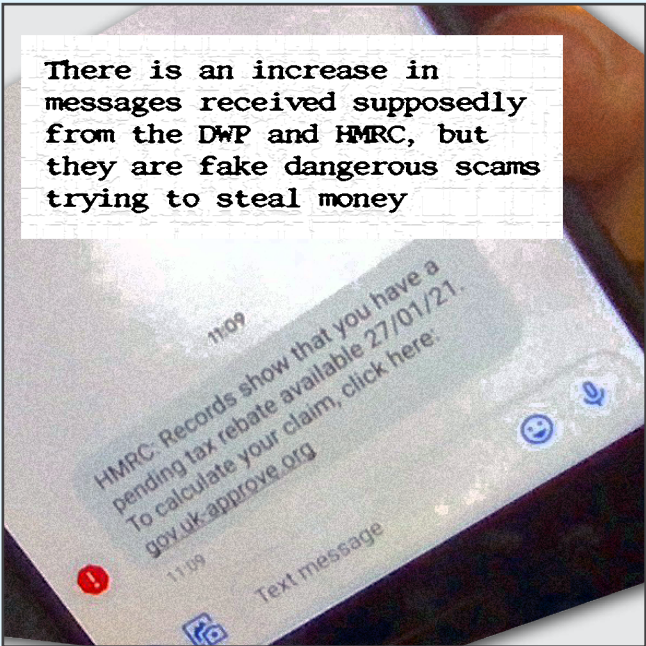

A.

B.

C.

What do you think?

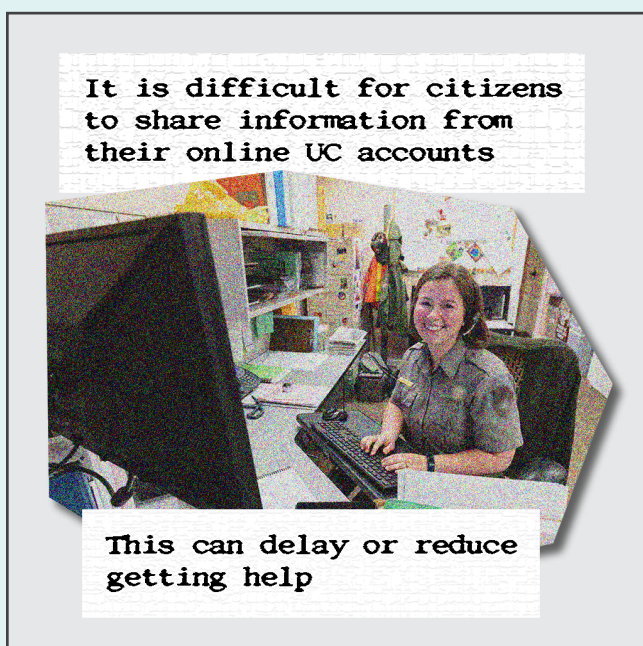

We will now ask some questions about what you think of this proposal.

Proposal 3

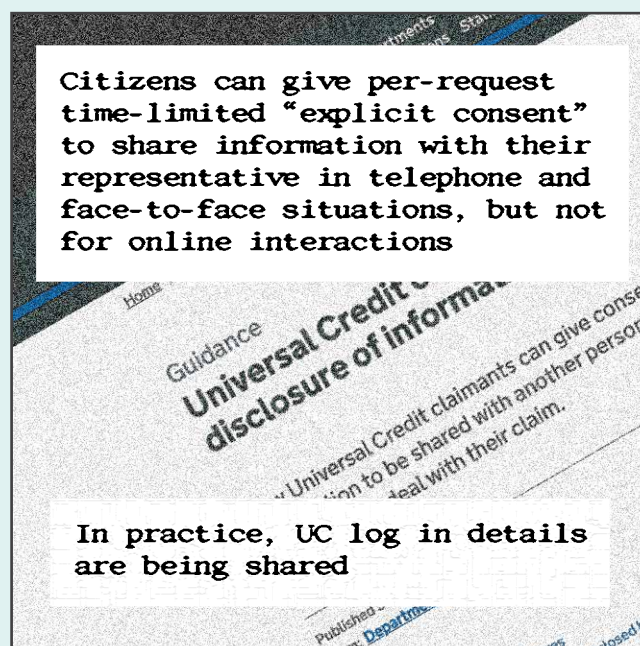

What did citizens say about Universal Credit online?

In previous interviews, some people mentioned these issues:

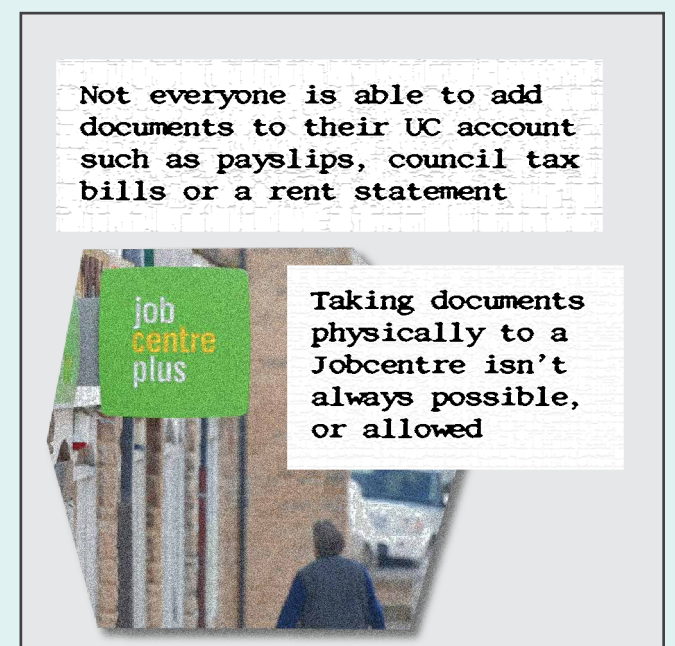

1.

2.

3.

What might help?

Proposal 3 is a service which allows citizens to give other people (e.g. relative, carer, benefits advisor) access to their online Universal Credit account. This can be briefly or for a longer period of time, and the citizen chooses which aspects the other person can see (such as Journal messages and To Do list but not payments) and whether they can make changes (such as replying to a Journal message, recording work search or reporting a change of circumstances).

How would that work?

Have a look at the explanation of what we'll call Proposal 3 “You:See”, on the next page:

Start here

Alec has an account and claims UC online but dislikes using technology: he and his wife don't have mobile data or internet access at home

But his nephew Sam is really good with computers and by using You:See Sam can log in to Alec's UC account, never seeing the real log in details

After looking at the online UC account, Sam phones Alec to tell him if he needs to do anything - Sam can add Journal messages later if necessary

Some time later...

Alec's young daughter is now on DLA and his wife on Carers Allowance, but does not understand why his UC hasn't changed

UC = Universal Credit
DLA = Disability Living Allowance

Alec contacts a local welfare benefits service and gives them access to his UC account via You:See, so a benefits specialist can read his Journal

The advisor looks at Alec's account and the benefit award letters, and uses a benefit rights checking tool, which confirms he has been underpaid for some time

After speaking with Alec by phone, the advisor uploads supporting evidence to UC online and makes a carefully worded Journal entry highlighting the issues and requesting they are investigated

You:See records when and which UC pages were viewed and any changes made, keeping this audit trail permanently in case of any misunderstandings or disputes

The following week...

When Sam next logs on, he sees a Journal message confirming there has been an underpayment, the new award rate and when the backdated amount will be paid - he phones Alec to tell him the good news

Alec is really pleased it's all sorted

Finish

How might this go wrong?

Here are some possibilities:

A.

The citizen never logs in themselves, so they miss an important instruction

Your commitments

This is what you've agreed to do in order to receive Universal Credit.

It's important that you understand that in return for your Universal Credit payment you're agreeing to look for work.

You'll need to commit to doing everything you reasonably can to find and take paid work. Your work coach will help you agree your

This leads to costly sanctions and getting into debt with DWP

B.

The person granted access to the UC account types the wrong information in, due to misunderstandings or mistakes

03 April 2017 13:26 About reduced paym

21 March 2017 16:41 Advance payment s

21 March 2017 16:39 About your Universa

A delay to reporting a change of circumstances leads to a penalty

C.

Someone else is able to use You:See to log in and look at UC accounts without permission

HACKERS!

They change the payment details to their own bank account

What do you think?

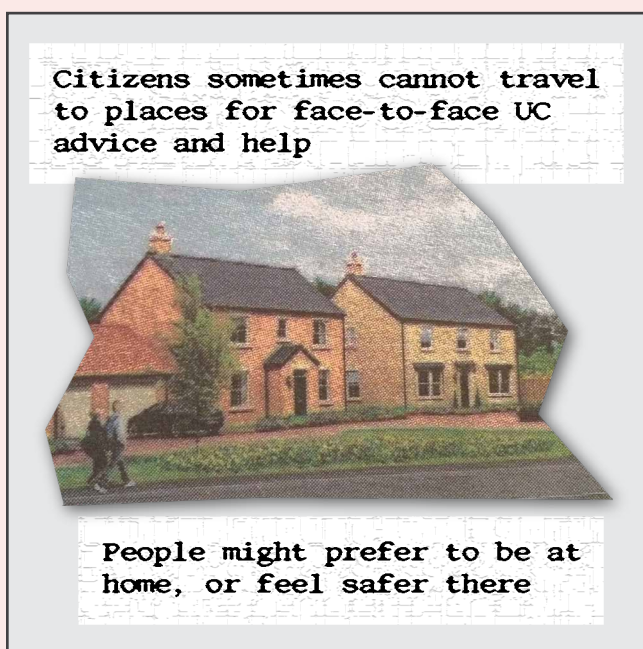

We will now ask some questions about this proposal.

Proposal 4

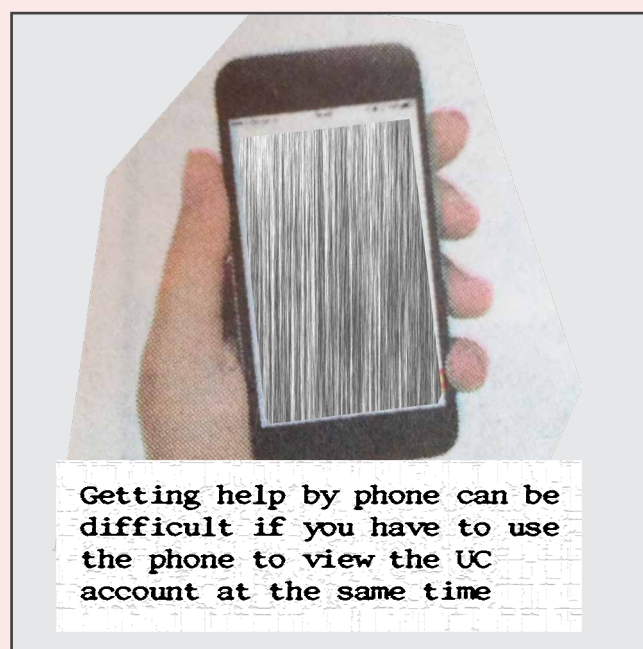

What did citizens say about Universal Credit online?

In previous interviews, some people mentioned these issues:

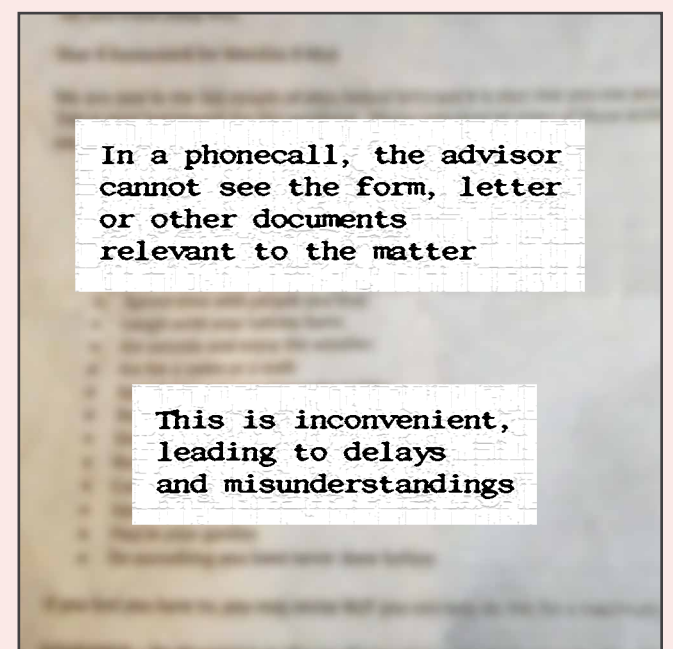

1.

2.

3.

What might help?

Proposal 4 is special glasses with built-in camera and microphone which can be used by a citizen from home, or wherever they are most comfortable, to have a support call with a welfare benefits advisor. The glasses are used to receive a telephone call from the advisor. Whatever the camera in the glasses is pointed at, is displayed on the advisor's computer screen. The citizen can show information such as by looking at a letter they received in the post, their Universal Credit account on their own phone, or anything else that might be relevant.

How would that work?

Have a look at the explanation of what we'll call Proposal 4 "Ad:Visor", on the next page:

Start here

This is Sarah. Sarah lost her job last year and made a claim for Universal Credit

Sarah sees a message in her online Journal which is confusing

Sarah cannot go out and contacts a familiar advice organisation to ask for help with UC

UC = Universal Credit

The matter is briefly discussed with the advice organisation which books a longer appointment with Sarah the following week, posting her the pre-charged Ad:Visor spectacles which have plenty of mobile data credit

One week later...

Sarah turns on Ad:Visor in advance and wears them before the call starts

Sarah and the advisor can talk to each other through Ad:Visor's built-in microphone and loudspeakers just like a normal phone call, and can optionally share the frame-mounted camera's view to show what she is looking at

The advisor can see what's in her Journal if she logs into UC on her own phone or tablet and looks at it

Sarah can show documents or letters to the advisor by gazing at them, discussing them at the same time

The matter is resolved in private with Sarah receiving reassurance and guidance what to do about the UC message without leaving home, and the call is concluded

Finish

A welfare benefits advisor uses her computer to make a call to the Ad:Visor device's number

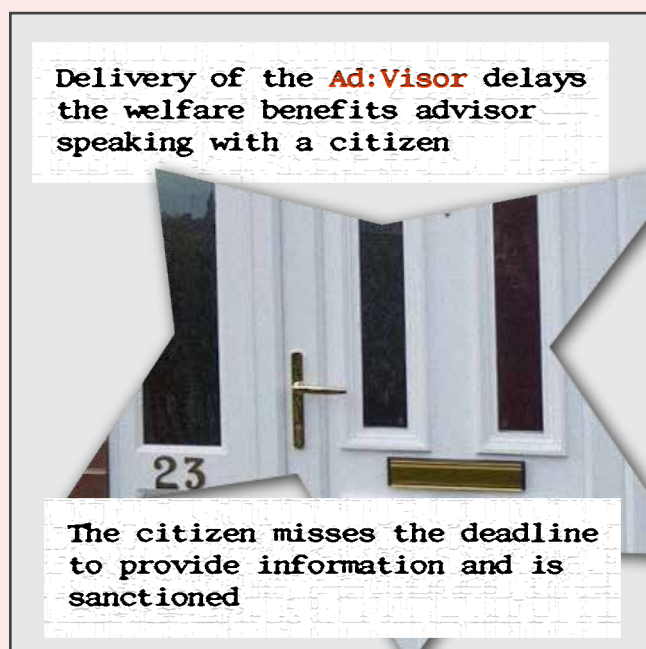

Anything Sarah looks at while wearing Ad:Visor can appear on the advisor's computer screen at the same time as they discuss her enquiry

How might this go wrong?

Here are some possibilities:

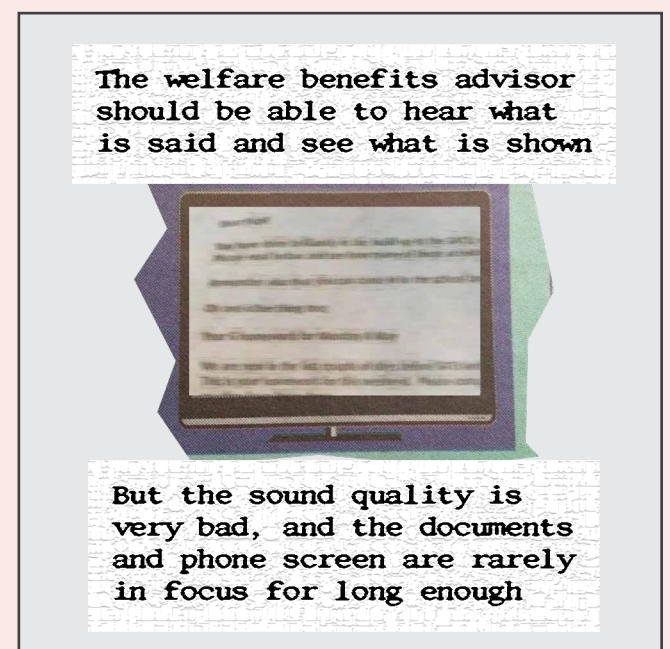

A.

B.

C.

What do you think?

We will now ask some questions about this proposal.
